DELIVERY & OPERATIONAL PERFORMANCE

Identify delivery inefficiencies and operational exposure.

INSIGHT & RECOMMENDATIONS

Key priorities to improve business & operational health.

Executive Summary

Business performance is constrained by weakening order value, high revenue concentration, and late delivery risk. Management should prioritize value growth, protect core revenue drivers, and improve delivery reliability where commercial exposure is greatest.

Insight 1 — Growth Quality

Higher Order Volume Is Not Translating Into Revenue Growth

Evidence

2017 vs. 2016

+4.8% Orders

−4.0% Revenue

−8.5% AOV

Year	Orders YoY %	Revenue YoY %	AOV YoY %
2016	-0.22%	-0.30%	-0.08%
2017	4.83%	-4.03%	-8.45%
2018	21.66%	-67.79%	-73.53%

Insight

Order volume increased, but declining AOV prevented higher demand from translating into revenue growth.

Recommendation:

Improve Value per Order by focusing on higher-value products and customer segments instead of relying primarily on order volume growth.

Priority

HIGH

Insight 2 — Revenue Concentration

Revenue Is Highly Concentrated in Core Departments

Evidence

81% of Revenue from Top 3 Departments (Pareto chart):

- Fan Shop 17.1M
- Apparel 8.0M
- Golf 4.6M

(Total Revenue: 36.78M)

Insight

Three departments generate approximately 81% of total revenue, creating significant dependence on a limited number of business areas.

Recommendation

Protect Core & Diversify Growth: Protect core department performance while selectively developing secondary revenue sources to reduce concentration.

Priority

MEDIUM

Insight 3 — Delivery Reliability

Delivery Risk Differs by Severity and Scale and Commercial Exposure

Evidence

Late Delivery Rate = 54.82%

- First Class → Rate Risk (95.3%)
- Standard Class → largest Late-Order volume & Late Revenue.
 - + Volume Risk (14,995 late orders)
 - + Revenue Risk (~8.4M late revenue)

Insight

First Class has the most severe reliability issue, while Standard Class generates the largest late-order volume due to its higher order scale.

Recommendation

Prioritize by Risk Type: Improve delivery reliability in First and Second Class, while prioritizing process and capacity improvements in Standard Class due to its larger late-order volume and revenue exposure.

Priority

CRITICAL

BUSINESS IMPACT

Delivery Risk Extends Into Core Revenue

Main Insight

54.71% of total revenue is associated with late-delivery orders, while Fan Shop—the largest revenue-driving department—accounts for 9.38M in late-order revenue.

Priority Recommendation

Protect High-Value Revenue Streams: Prioritize delivery improvements across high-revenue departments and high-risk shipping modes to protect core revenue streams.

Management Action

Improve Order Value → Protect Core Revenue → Improve Delivery Reliability → Monitor Commercial Exposure
